REMARKS

Applicant has amended this application in response to the office action. Claims 14 and 16, which the examiner indicated containing allowable subject matter, have been added to claims 1 and 9, respectively. Thus, these claims define over the prior art.

Claims 5 and 10 remain as rejected independent claims. The examiner argues that these claims are properly rejected over Ullyott in view of the Bedouet patent. Bedouet discloses that in the prior art it is known to "shed" or turn off electrical devices under certain events when there is a potential power failure, such as loss of engine power, start-up of the engines from electrochemical accumulator batteries, or else a partial failure.

The claimed invention requires that an electrical load requirement be reduced during APU use. APU use is not mentioned in the Bedouet patent. Thus, there is no apparent reason why one would provide Ullyott with the control of shedding electrical requirements while the APU speed is approaching its target speed. Simply, it appears this proposed combination is based on hindsight. Reconsideration of this rejection is requested.

Applicant believes that no additional fees are necessary, however, the Commissioner is authorized to charge Deposit Account No. 08-0385 in the name of Hamilton Sundstrand Corporation for any additional fees or credit the account for any overpayment.

Respectfully submitted,

  
Theodore W. Olds, Reg. No. 33,080  
Carlson, Gaskey & Olds  
400 W. Maple Road, Ste. 350
